

Steps for Creating and Running a program in Python

Step 1: Open any text editor or IDE, such as:

- IDLE (comes with Python)
- VS Code
- Notepad / Notepad++

Step 2: Type your Python code

```
1 print("Hello World")  
2
```

Step 3: Save the file with extension .py

Example: hello.py

Step 4: Run/ execute the program and see the output

Basic Programs

1. Write a program to print sum of 10 and 20.
2. Write a program to print cube of 3.

Great Programming

How to input value at run time?

In Python, the input() function is used to input value at run time.

The input() function take the data as a string, but we can convert that value in numeric type by using type casting function.

Example:

```
1  value=input("Enter any value:")  
2  print("You entered: ",value)  
3
```

Basic Programs

1. Program to input two number and print their sum.
2. Program to calculate Area of Rectangle.
3. Program to input value of kilometer and convert into centimeter.
4. Program to input two numbers and swap their values.
